

Polycomb target enrichment in BAP1-KO differential mCH

Inaccessible-heterochromatin prediction: Polycomb genes depleted from mCH hypermethylation

Differential mCH enrichment per chromatin state

Gene-body states in the top row, promoter states in the bottom row. Each state against every other state; counts are (direction genes in state / genes in state)

Differential mCH rate inside and outside each Polycomb definition

Percent of genes in each group that are significant, with the counts behind each bar
