

MeCP2 Responds to H2AK119ub Where mCH Does Not Change

Effect size of every mark, the multivariate model of set membership, and MeCP2 against H2AK119ub inside the focal set

Effect Size of Each Mark at Genes Where MeCP2 Moves Without mCH

Cliff's delta with 95% confidence interval. Positive means the focal set carries the larger values. Stars mark the BH-adjusted Mann-Whitney p-value. against MeCP2_and_mCH, H2AK119ub ranks 1 (signal) and 4 (peak) of 5 marks; against Neither, H2AK119ub ranks 1 (signal) and 3 (peak) of 5 marks.

Which Mark Predicts MeCP2 Change Without mCH Change

Logistic model on standardised peak log2FCs. n = 671 genes carrying all four marks, 11 in the focal set. AUC = 0.473 [0.277, 0.669], McFadden R2 = 0.0050.

MeCP2 Fold Change against H2AK119ub at Genes Without an mCH Change

Spearman rho = +0.272, p = 3.72e-02, n = 59 genes
