

Marks moving in the predicted direction per gene

Genes with all four marks measured (n = 1,360). All four predicted: 11.4% of neuronal genes against 12.0% of other genes, OR = 0.94 [0.65, 1.34], p = 7.93e-01

Counted by the direction of the fold change

Median: neuronal 2.00, other 2.00 | mean: neuronal 1.696, other 1.923 | p = 5.24e-04

Counted by direction and FDR < 0.05

Median: neuronal 1.00, other 1.00 | mean: neuronal 0.988, other 1.042 | p = 1.44e-01
