

Section 70_04: chromatin remodeling at gene-set and MeCP2-up genes

Double overlap (gene set and MeCP2-up): Neuronal gene set 129 genes | Synapse gene set 74 genes

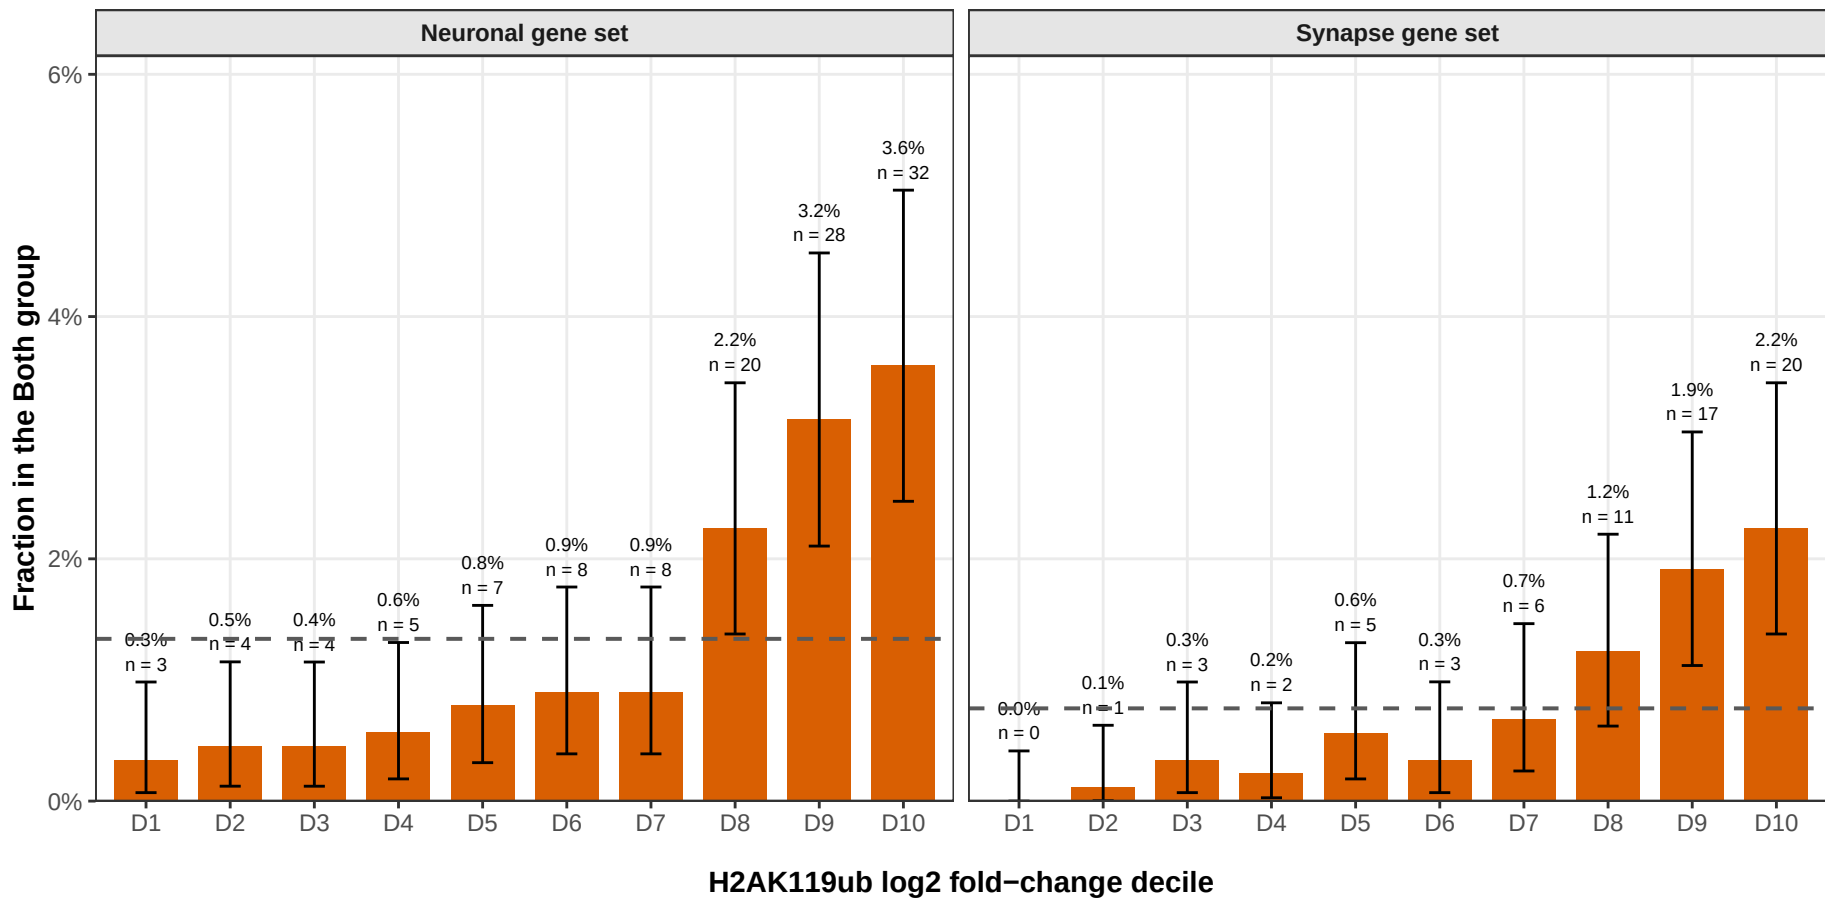

Genes by gene-set and MeCP2 membership

Both = in the gene set and gaining MeCP2 binding; Neither is the reference group of every comparison

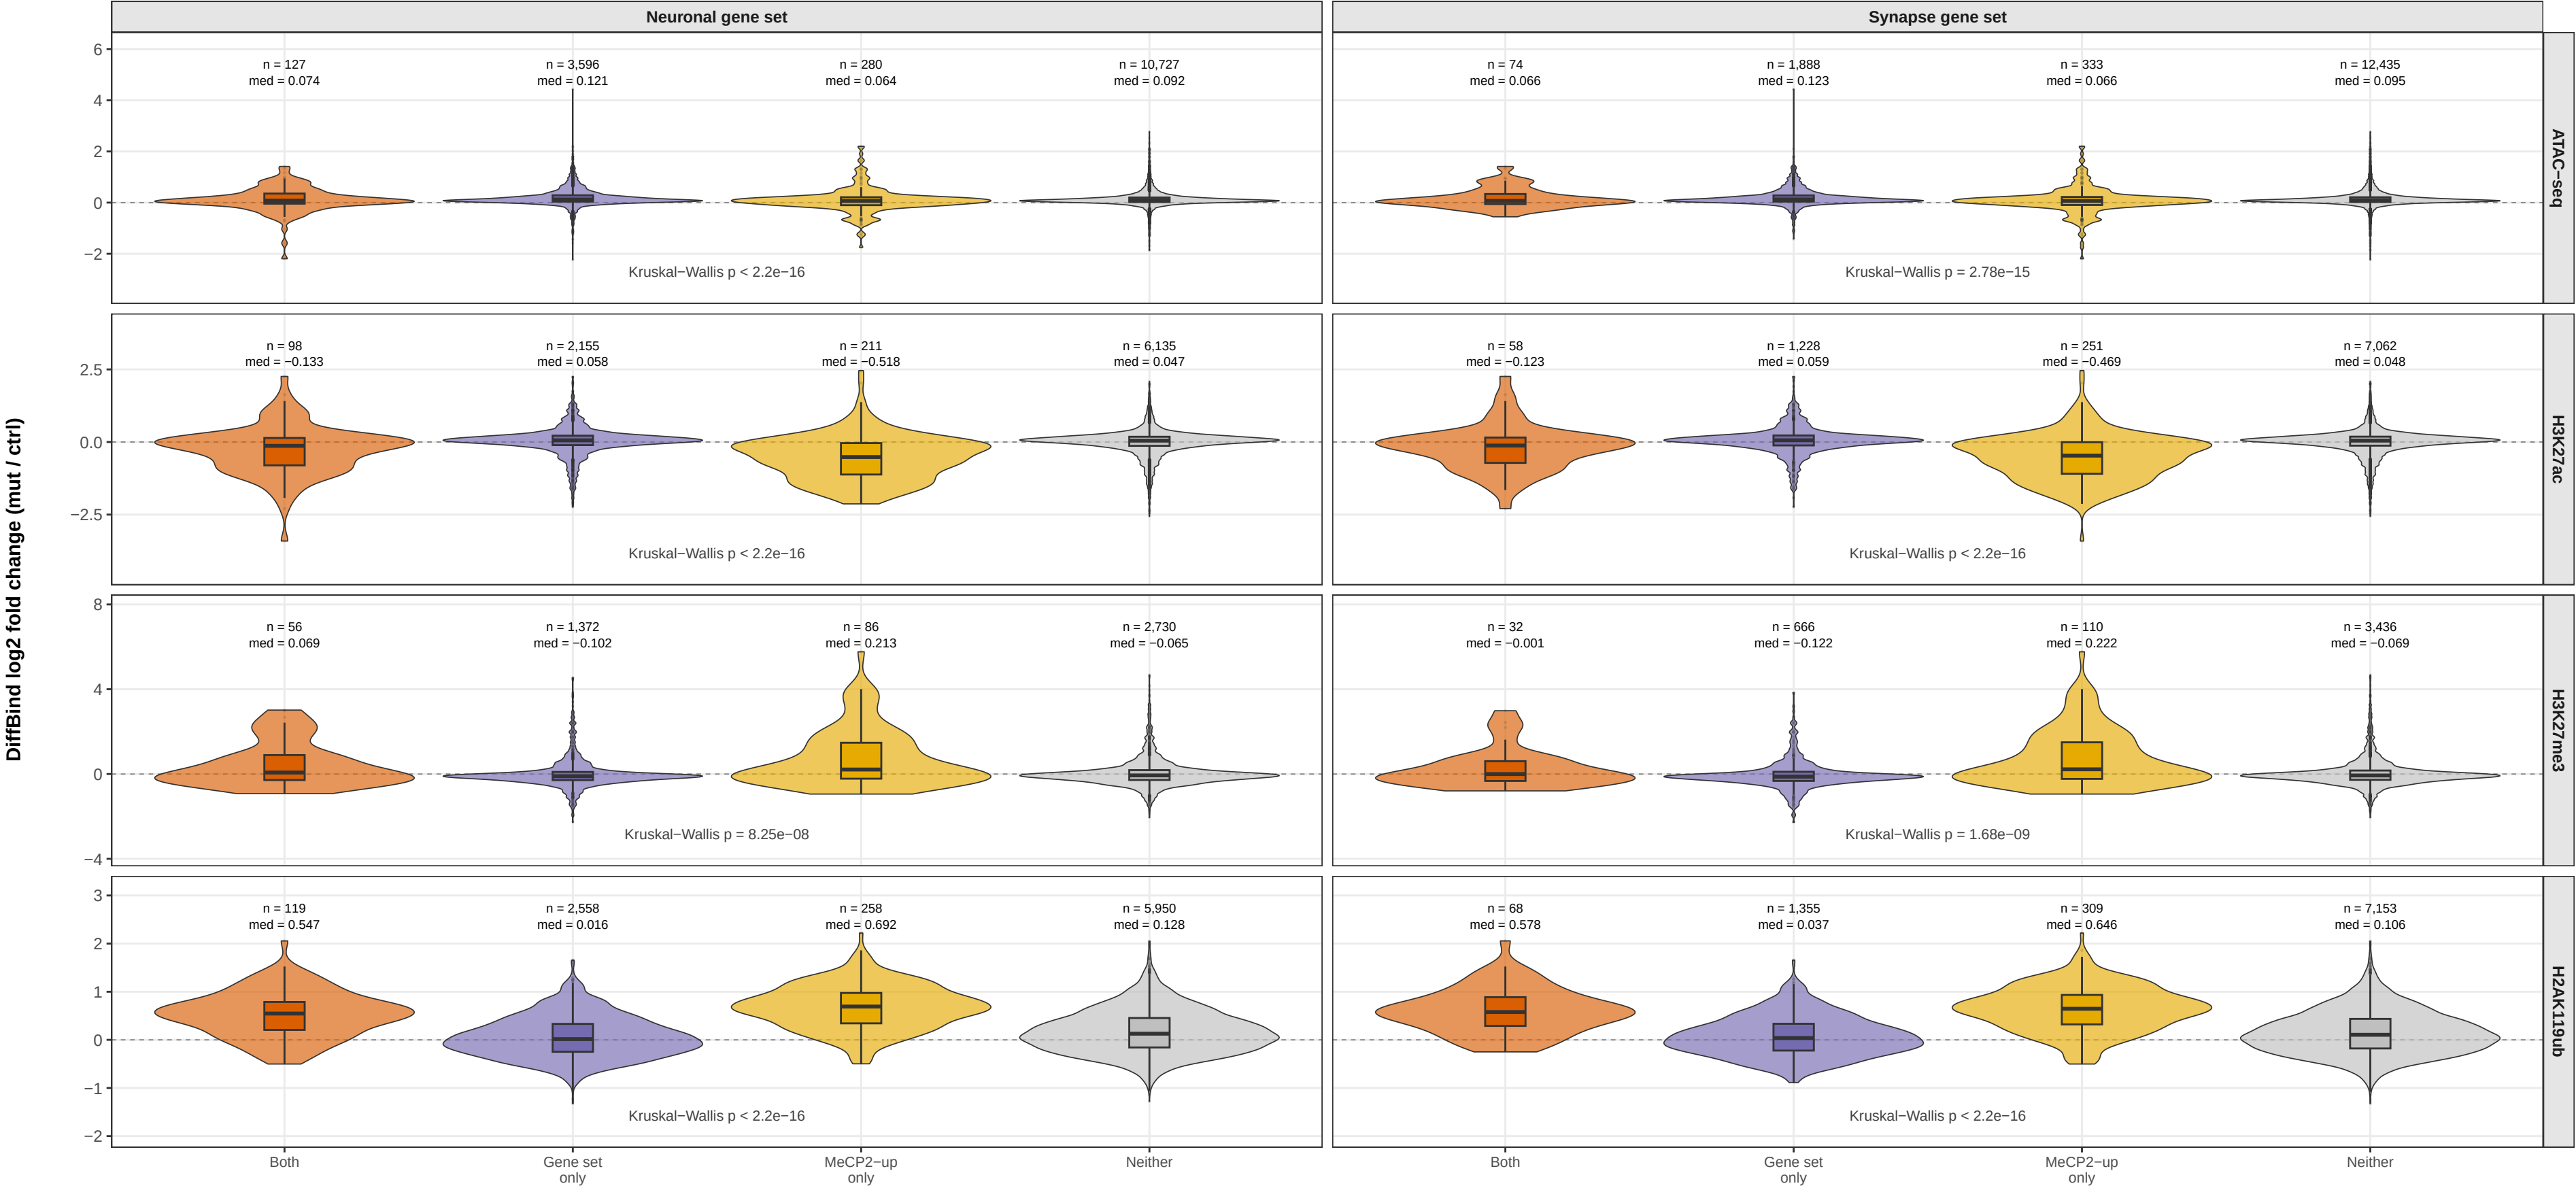

Double-overlap genes across H2AK119ub fold-change deciles

D1 is the strongest K119ub loss, D10 the strongest gain; dashed line is the overall Both fraction

Chromatin mark change by gene-set and MeCP2 membership

DiffBind log2 fold change (mut / ctrl) per gene; n and median printed above every group

Chromatin change against the Neither group

Hodges-Lehmann location shift with 95% confidence interval; stars mark BH q < 0.05
