

Gene-body mCA differential methylation

BAP1-KO vs control | 106 higher, 50 lower in mutant (Bonferroni $p < 0.05$) | 23 robust to leave-one-out

20371 genes tested. Significance basis: Bonferroni $p < 0.05$ (156 genes). Raw p on the y-axis; horizontal lines mark the corrected cutoffs. Leave-one-out: each gene was refit 8 times, dropping one sample each time. Ringed points retain significance in all 8 refits.
