

mCA volcano coloured by leave-one-out robustness

Only 23 of 156 significant genes survive all 8 refits; grey points are not significant

20371 genes tested. Significance basis: Bonferroni $p < 0.05$ (156 genes). Raw p on the y-axis; horizontal lines mark the corrected cutoffs.

Leave-one-out: each gene was refit 8 times, dropping one sample each time. Ringed points retain significance in all 8 refits.
